

## MICROSOFT INTERNET EXPLORER SECURITY SETTINGS FOR USING PROUNIT AND PROSELECT

User's Internet Explorer requires some security settings to be able to run ProUnit correctly.

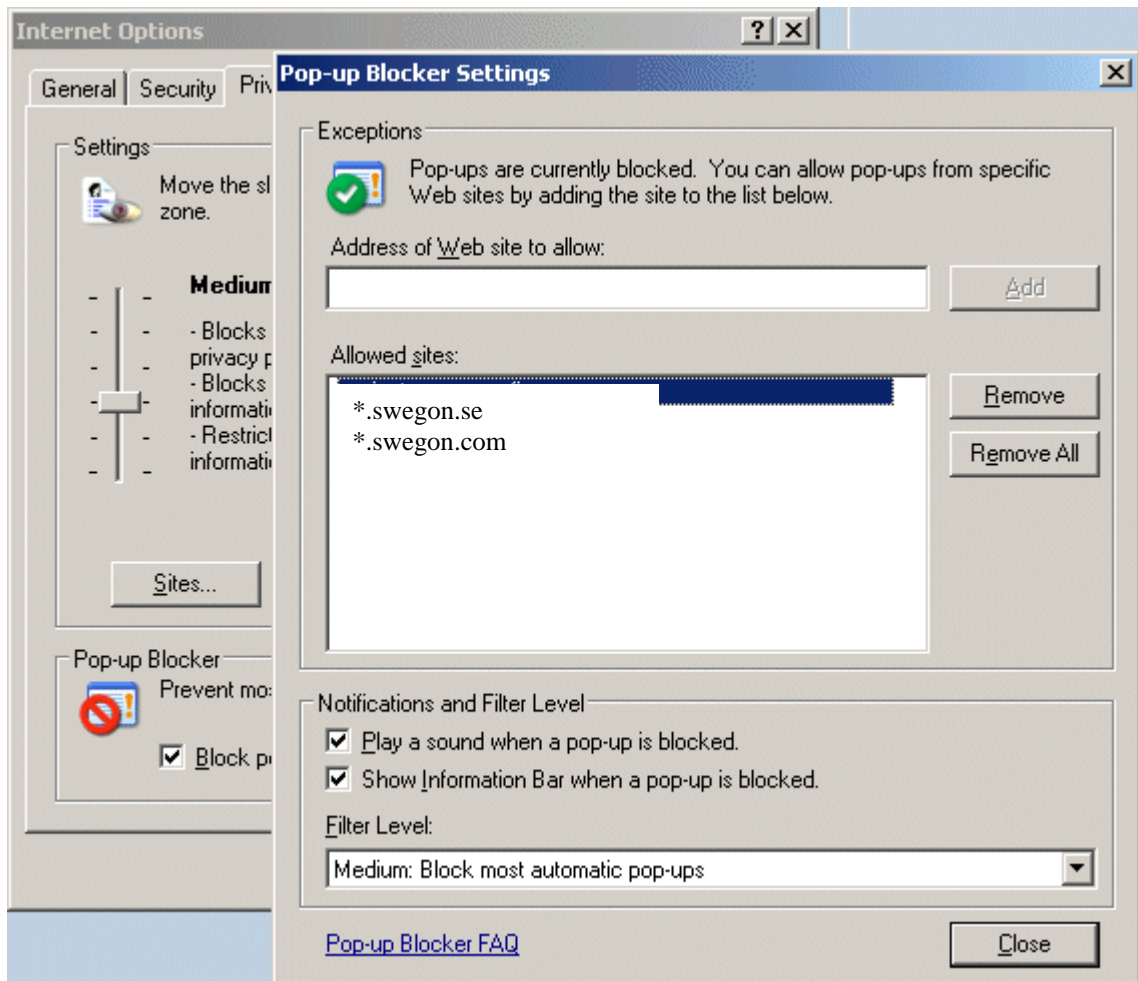

### Cookies

ProUnit a ProSelect requires cookies to be enabled. If you experience problems with using ProUnit and ProSelect, enable cookies for the server.

## Pop-ups

ProUnit uses pop-up window for showing printouts. Therefore the server address should not be blocked by pop-up blocker. E.g. user can add server address to the allowed sites.

## Automatic downloads

ProUnit uses automatic downloads for printouts. Therefore it must be enabled for ProUnit's server address.

### Solution

If user's company's security policy does not allow the first solution then ProUnit's server address can be added to Trusted Sites Zone. And there user can enable automatic downloads.
