Installation instructions

Contents of package
- Router (pre-mounted SIM card included)
- Power supply
- Crossover UTP cable
- External antennas
- Holder for DIN rail mounting
- Installation instructions
Mount and use

First use
Before you put router into operation, it is necessary to connect components that are needed to run your application.

Antenna
Connect the external antenna to the ANT connection on the router. Please use the accessory TBRX-1-12, either 1 or 10 meters, if you need to extend the antenna cable.

The router cannot operate without antenna attached, SIM card inserted (pre-mounted) and power supply connected.

The router must be connected to antenna while in operation, otherwise damage to the router may occur.

Use SMA connector for antenna connection. Antenna is primarily connected by screwing at ANT, see figure 1. An additional antenna can be connected at DIV for better signal strength.

Network (Ethernet)
The router have by default a standard network port (ETH1) for connecting products, see figure 2. If additional connections are required use the accessory Switch.

Use the router’s other network port (ETH0) when you want to connect to a building network or a BMS system.
* Please contact Swegon for adapting the router to a BMS connection.

Power
The supplied transformer must always be used for connecting to the power grid. First connect the power cable to the router and tighten the connector screws.

Then connect the transformer’s power plug to an electrical outlet.
Mount and use

Router status
See LED indicators on the router’s front panel for status information.

See Swegon Connect web manual for detailed information about all LED indicators.

Setting up the router
See Swegon Connect web manual for instructions. The document can be downloaded from www.swegon.com

Position of the router
Mount the router in a position with good mobile communication signal strength. If necessary, use the extra antenna (accessory) to ensure sufficient signal strength.

Mounting router on DIN rail
You can mount the router on any standard DIN rail with the supplied DIN holder. The DIN holder can be mounted on the bottom or on the back of the router. It is possible to mount the holder in any direction for maximum flexibility.

When the DIN holder is mounted on the router you can snap it onto a standard DIN rail.

Removal router from DIN rail
Remove the router from the DIN rail by lightly pushing it upwards so that its top part snaps out from the rail and then fold the router out of position.
Contents of package
The package contains these parts:

- Router (pre-mounted SIM card included)
- Power supply
- Crossover UTP cable
- External antennas (indoor use only)
- Holder for DIN rail mounting
- Installation instructions

Accessories
Swegon Connect can be equipped with an extra antenna and an extension cable to be mounted in a location where better signal strength is obtained.

An Ethernet switch can be added for connecting up to 7 products

- Extra antenna (indoor and outdoor use)
- Extension cables (1 or 10 meters)
- Ethernet switch (for connecting up to 7 products)
- Electric cabinet (IP65)

See product sheet for more information about accessories.
