

STOVE GUARD FOR CASA COOKER HOODS

SAFERA stove guard, available
for all Genius cooker hoods.

SAFERA
We sense what humans don't

Swegon

SAFERA stove guard

Swegon CASA cooker hoods can be equipped with a SAFERA stove guard. The stove guard helps to avert typical kitchen accidents by preventing the cooker from being left unsupervised while in use and cutting the power if you should forget to turn the cooker off.

Safera stove guard is based on an intelligent sensor system that if necessary allows Safera to evade different types of dangerous situations that can occur without disrupting every-day cooking.

The power control unit (1-phase or 3-phase) is connected to the power supply of the stove. In most cases the sensor unit is ready-installed in the right place in the cooker hood, but can also be installed in a functional area close to the cooker hood. Swegon also recommends installing a water leakage monitor (SA1).

Easy installation and maximum safety

A stove guard is always preinstalled in CASA Genius Safera cooker hoods.

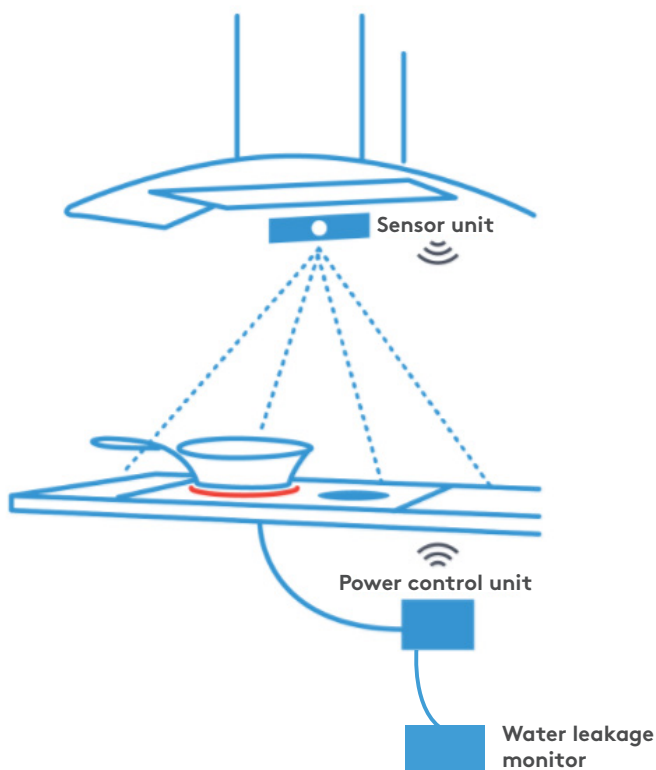

In cooker hoods: Blues, Salsa, Tango and Pop it is installed at the factory at the back of the cooker hood. On Samba and Jazz cooker hoods, the stove guard is easily installed in the specified area below the hood using tape. Irrespective of whether the sensor unit is preinstalled or not, the Safera stove guard is always powered from the cooker hood – no battery replacement is necessary!

State on the order which power control unit is required:

- 632039, three phase connection
- 632037, single phase connection

It is also possible to connect a water leakage monitor SA1 to the system.

Safera cooker guards comply with the demands set out in the European stove guard standard EN 50615, and can therefore be used in accordance with the electrical installation standard SFS 6000.

Safety Product of the Year
2012 Sweden

Test success
SINTEF 2011

For fire safety
The Finnish Fire Officers'
Association

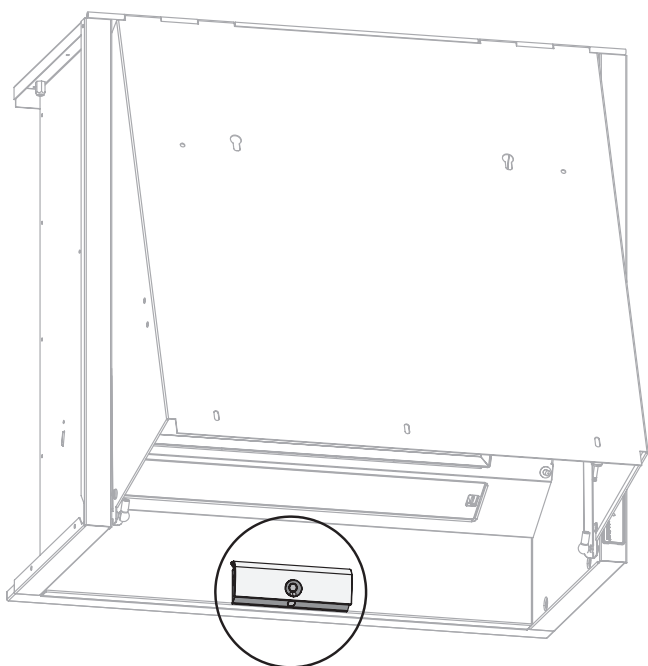

Innovation prize 2007
Ministry of the Interior

- 1 Maximum safety
- 2 Continuous voltage supply from the cooker hood
- 3 No need to replace the battery
- 4 The product complies with the EN 50615:2015 standard.
- 5 Pre-installed in the cooker hood
- 6 Available for six different hood models
- 7 Several water leakage monitors can be connected

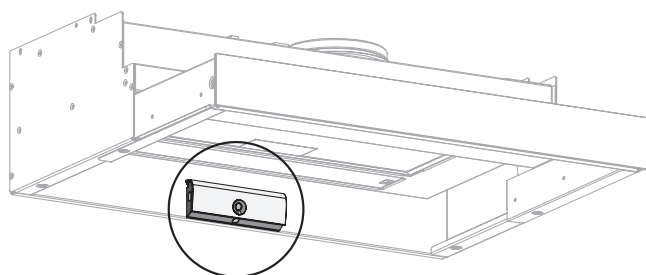

SAFERA stove guard fits all Genius cooker hoods
