LAMBDA SKY

THE BEST INDOOR AIR QUALITY FOR LARGE SPACES

Air Quality

- Various filters options (from G4 to F9)
- Fresh air management with Air Quality Sensors
- Humidity management for the best comfort all year long

Re-Use of Waste Energy

- Thermodynamic heat recovery
- Cross Flow Heat recovery
- Hot Gas Recovery

Enhanced Efficiency

- Inverter Plug Fans
- Inverter compressors
- Double Skin Sandwich panel

Smartness

- Advanced Variable Air flow solutions
- Smart Dampers Management
- Adaptive Defrost
- Cascade control
- Floating Set point compensation
- Remote Web control

Flexibility & Configurability

- Full Recirculation
- Fresh Air management
- Humidifier
- Auxiliary Heating options
- Flexible air return and delivery layouts

Use of Free Energy

- Enthalpic Free Cooling
- Free Heating opportunities

Low **GWP** below **700**

Smart Optimization Functions
to exploit the
best performance and efficiency
in all working conditions

THE GREENEST ROOFTOP EVER

The **right fresh air**
in any moment

APPLICATIONS

Lambda SKY can be a real **All in One** solution for those who has space constrains or specific building needs.

Different Layouts ▶ Flexible & Adjustbale air intake and delivery positions

Strongly Variable Heat Load ▶ Optimize Consumption in any conditon

Energy Bills ▶ Efficiency far above minimum Tier 2 treshold

Strongly Variable Occupancy ▶ Multiple Variable Airflow Solutions

CONFIGURABILITY

RS4S

Heat Recovery to recover the whole energy from the exhaust air

FC3S
Intake & Rejection

FC2S

Fresh Air Intake

BASIC

Full Ricirculation

FC: free cooling

HEAT RECOVERY FROM REFRIGERATED CABINETS

Re-use of waste heat energy from cabinets to warm the environment for free.

THERMODYNAMIC

HEAT RECOVERY

Take advantage of the exhaust air to improve condensation in summer and evaporation in winter.

Cooling

External T°: 35°C | Return T°: 27°C

+5% EXTRA CAPACITY/EFFICIENCY

Heating

External T°: 0°C | Return T°: 20°C

+10% EXTRA CAPACITY/EFFICIENCY
DEFROST CYCLE REDUCTION

EC PLUG FANS

ELECTRONICALLY COMMUTATED BRUSHLESS MOTOR AS OPTION

Reduced energy consumption and noise, self-adaptation to changes in heat load, air volume or static pressure.

USER SIDE

SOURCE SIDE

Unique Software
Features

A Control
Continuously Evolving
following the Latest
Industry
Requirements

SET POINT COMPENSATION

Reach the perfect indoor climate comfort
Let the unit work with the maximum efficiency (lowest ΔT between indoor and outdoor conditions)
Minimize energy expenditure

BESPOKE SETTINGS

The unit can be programmed with the highest flexibility on the days and timings:

Boosted freshair function

Wash an ambient opening up all the Fresh Air Dampers

Pre-Heating & Pre-Cooling

A software routine can be programmed to quickly restore the comfort conditions closing the fresh air and pushing at the maximum cooling/heating sources

CASCADE CONTROL

Cascade Control means the opportunity to act on the supply setpoint based upon the real heat load thus saving energy in most of the operating condition.

Neutral Air means avoiding unrequired Cooling/Heating.
