

# FLOWBAR

Architectural High Capacity Linear Slot Diffuser

## QUICK FACTS

- High capacity single slot diffuser available in five slot widths of 25mm, 38mm, 51mm, 63mm and 76mm
- Architectural appearance
- Integrates into a variety of ceiling & wall types
- 8 configurations & 5 slot widths
- High Throw 36 l/s/m - 180 l/s/m
- Jet Throw 31 l/s/m - 480 l/s/m
- Mounting – Ceiling/Bulkhead/Sidewall/Recessed
- Modular or Continuous lengths
- Custom curving available to meet designer's requirements
- Heavy wall extruded aluminium construction

# Technical Description

## Design

FlowBar is an architecturally designed high capacity linear slot diffuser. It is designed to combine a high air handling capacity with maximum flexibility and is suitable for either ceiling or sidewall applications. The flexibility of the system can blend into a design or provide contrast with its striking but simple design.

FlowBar is a flexible system that can provide straight lines or curves to blend with other architectural elements and enhance the overall concept of the project.

The FlowBar systems satisfy both the Architects and Engineer's requirements for designing an air distribution system that will maintain optimum room air conditions whilst being efficient yet inconspicuous.

## Material and Surface Treatment

Manufactured from heavy wall extruded aluminium

### Type 66

As Standard frame are polyester powder coated to RAL9010 – Matt (20%) finish to external frame surfaces. Polyester powder coated to RAL9005 matt (30%) finish to Internal surfaces.

Alternative standard RAL colours to select from:

- RAL 9016 Matt (20%) finish - White
- RAL 9003 Matt (40%) finish - White
- RAL 9006 Matt (40%) finish - Silver
- RAL 9005 Matt (30%) finish - Black

### Type 22, 55 & 11

As Standard frames & internals are polyester powder coated to a RAL 9005 matt (30%) finish to all surfaces.

Other colours available to special order.

## Accessories

Flowbar is available with optional blanking plate (non-air handling) or return (air-handling) light baffle. Both are ordered in 1m lengths, black etched RAL 9005.

## Installation

For our range of fixing details, please see our installation, operation & maintenance manual.

## Maintenance

For maintenance guidelines please see our installation, operation & maintenance manual.

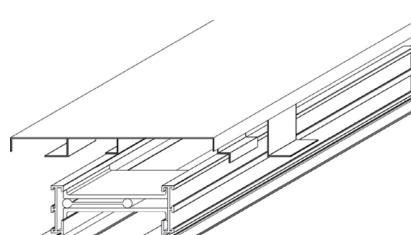

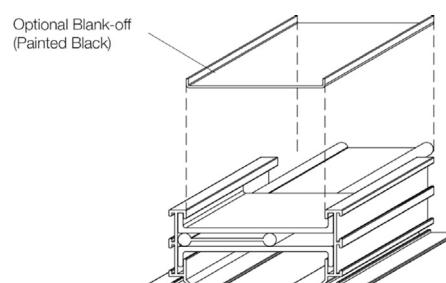

## Environment

Our standard power coating process is suitable for a C3 Internal environment classification, ISO 12944-2. Design life 15 - 25 years.

## High Throw Series (HT)

## Jet Throw Series (JT)

# FLOWBAR

## Model Types

### High Throw Series (HT)

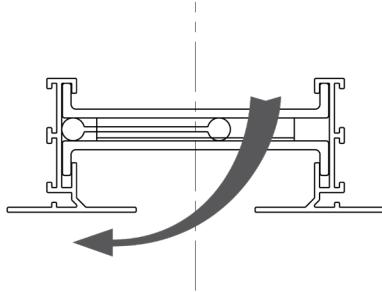

The High Throw series is primarily designed for ceiling applications and allows the air diffuser to become inconspicuous, whilst fully integrating into the ceiling system.

Integral pattern controllers are 600mm in length allowing the airstream to be directed left and right for horizontal and vertical airflow.

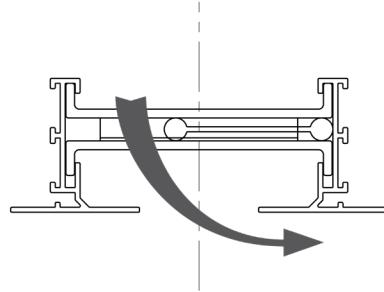

### Configurations

- HT-10 / 25mm Slot
- HT-15 / 38mm Slot
- HT-20 / 51mm Slot
- HT-25 / 63mm Slot
- HT-30 / 76mm Slot

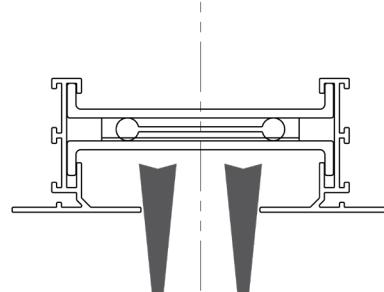

### Pattern Controller Setting

Horizontal Left

Horizontal Right

Vertical

### Jet Throw Series (JT)

The Jet Throw series has pattern flow controllers to allow the airstream to be jetted in a horizontal direction (sidewall mounted) whilst fully integrating into the wall system.

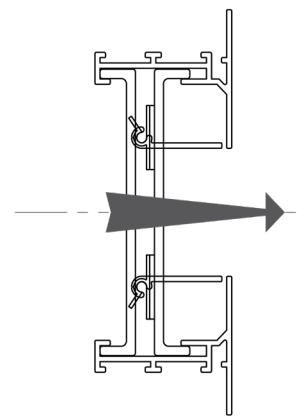

Jet Throw pattern controllers allow extended throws in typical high bay applications for heated and/or cooled air. Jet Throw pattern controllers are useful along perimeter walls where heated air can be directed downward.

Integral pattern controllers 600mm in length allow the airstream to be directed vertically left and right (ceiling application) and up and down (sidewall application) at a 45° angle.

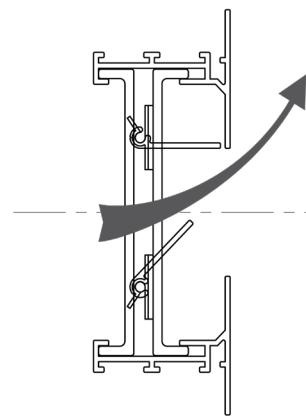

### Configurations

- JT-10 / 25mm Slot
- JT-15 / 38mm Slot
- JT-20 / 51mm Slot
- JT-25 / 63mm Slot
- JT-30 / 76mm Slot

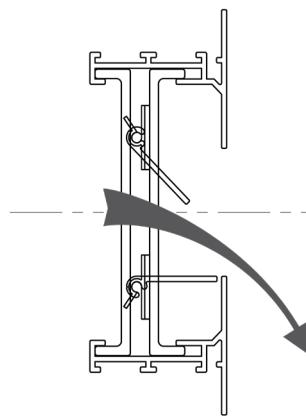

### Pattern Controller Setting

Horizontal

Upward

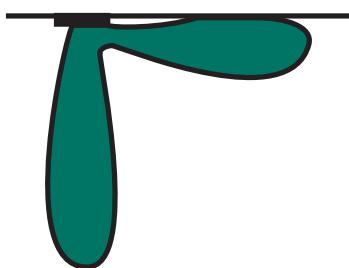

Downward

## Project Planning

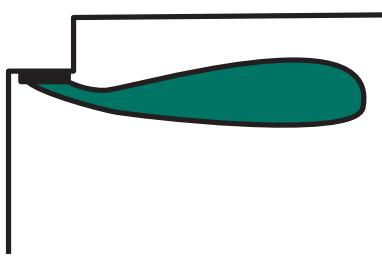

The below details are taken from the Waterloo Green book; Chapter 5. Comparative Selection Data, 5.1 Supply Terminal location & type of Distribution

### High Throw Series (HT)

Ceiling placement  
Horizontal or Vertical Distribution

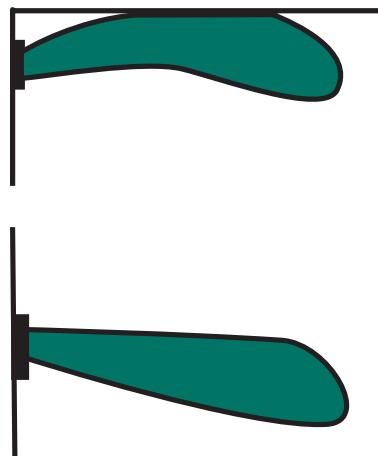

Bulkhead Underside placement  
Horizontal Distribution

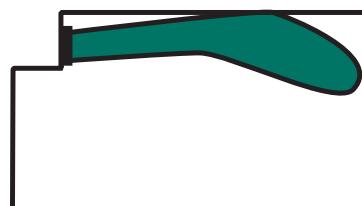

### Jet Throw Series (JT)

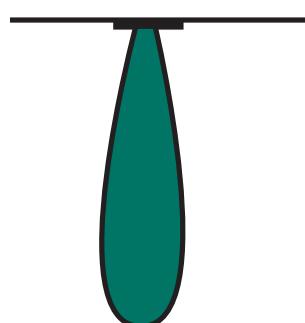

Sidewall Placement  
Horizontal Distribution  
Confined Jet & Free Jet

Bulkhead vertical face placement  
Horizontal Distribution

Ceiling Placement  
Vertical Distribution

For additional design guidance please consult the Waterloo Greenbook;

Chapter 2. Air flow Patterns

- 2.1 Mixed Airflow Characteristics
- 2.2 Jet Characteristics

Chapter 4. Selection of Air Terminal Devices

Chapter 6. VAV & CAV

- 6.6.1 Sculptured or coffered ceilings

Chapter 7. Comfort Criteria

# Sizing

- Aerodynamic testing carried out in general accordance to BS EN 12238:2001 (Ventilation for buildings - Air terminal devices - Aerodynamic testing and rating for mixed flow applications).
- Isothermal throw values are given for terminal velocities of 0.5 and 0.25m/sec respectively.
- Alternative air supply temperatures & terminal velocities are available using RUD selection tool.
- Throw values for High Throw units are based on a 1-way discharge from the slot with ceiling coanda.
- Throw values for Jet throw are based on pattern controller set at 0° discharge in a free jet application.
- Pressure loss measurements are shown as static pressure given in pascal (Pa)

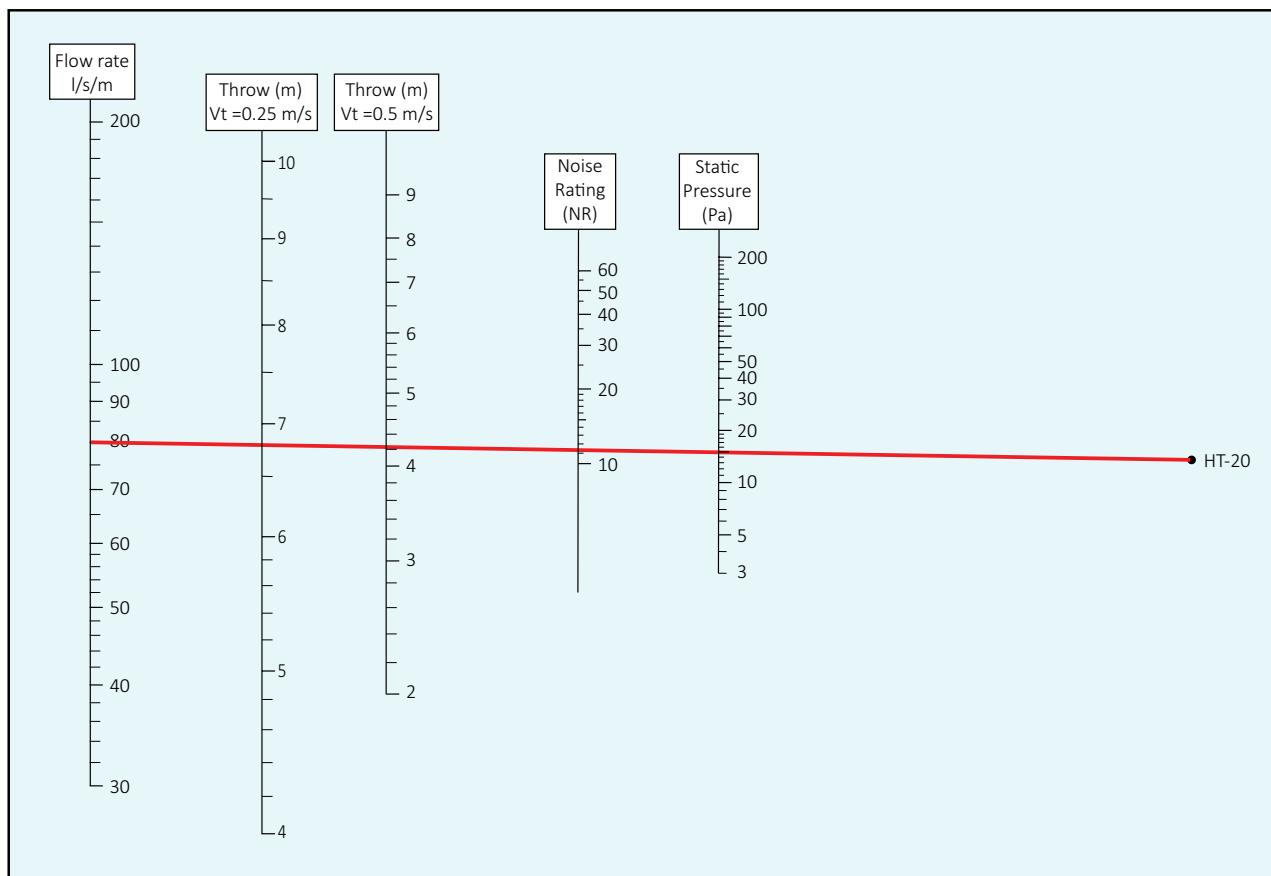

- Acoustic testing carried out in general accordance to BS EN ISO 5135:1999 acoustics. Determination of sound power levels of noise from air-terminal devices, air-terminal units, dampers and valves by measurement in a reverberation room.
- Each NR value represents the noise criteria curve which will not be exceeded by the sound pressure in any of the octave bands, 2nd through 7th, with a room absorption of 10dB, re 10-12 watts.
- For supply units used as a return, add NR 3.

## Selection Example

### 1800mm long active area

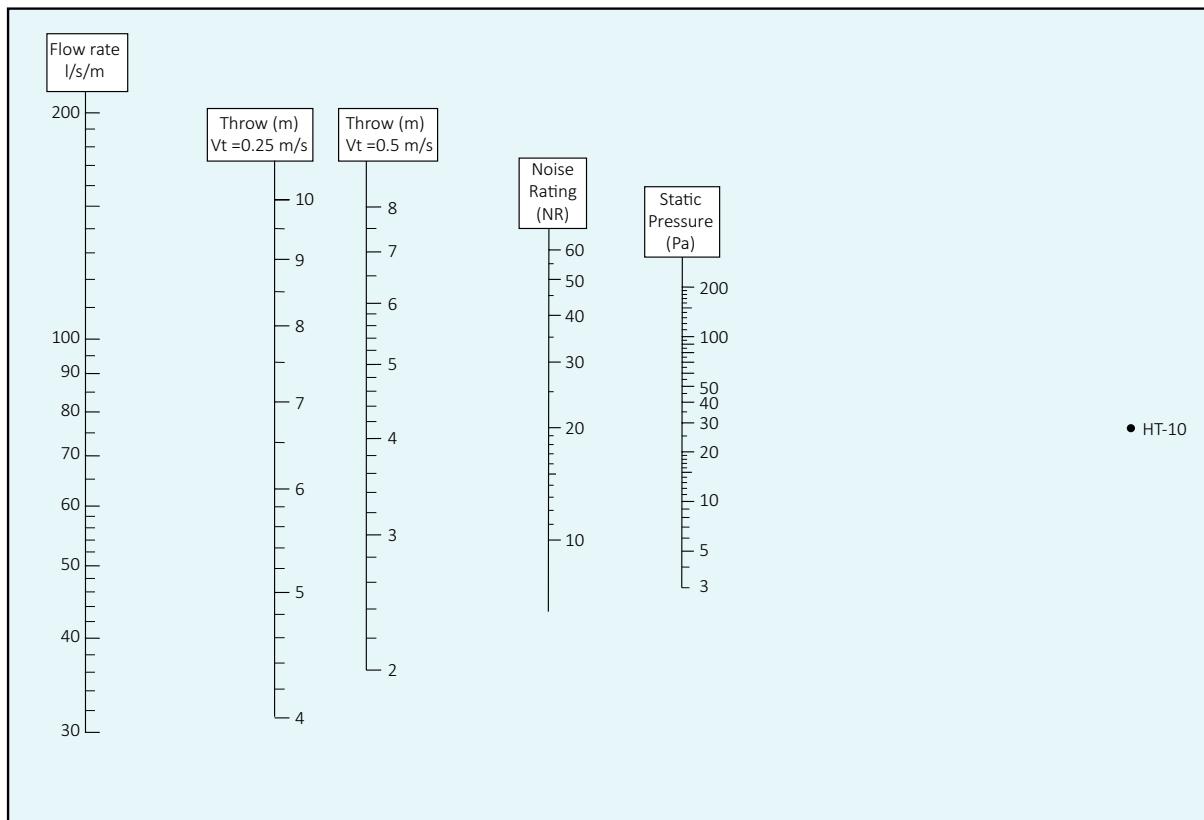

Total flow rate  $144 \text{ l/s} \div 1.8\text{m}$   
 $= 80 \text{ l/s/m}$

Throw @ 0.5m/s  $V_t = 4.2\text{m}$   
 Throw @ 0.25m/s  $V_t = 6.8\text{m}$   
 Static pressure loss – 15pa  
 Room Noise Rating – <NR 15

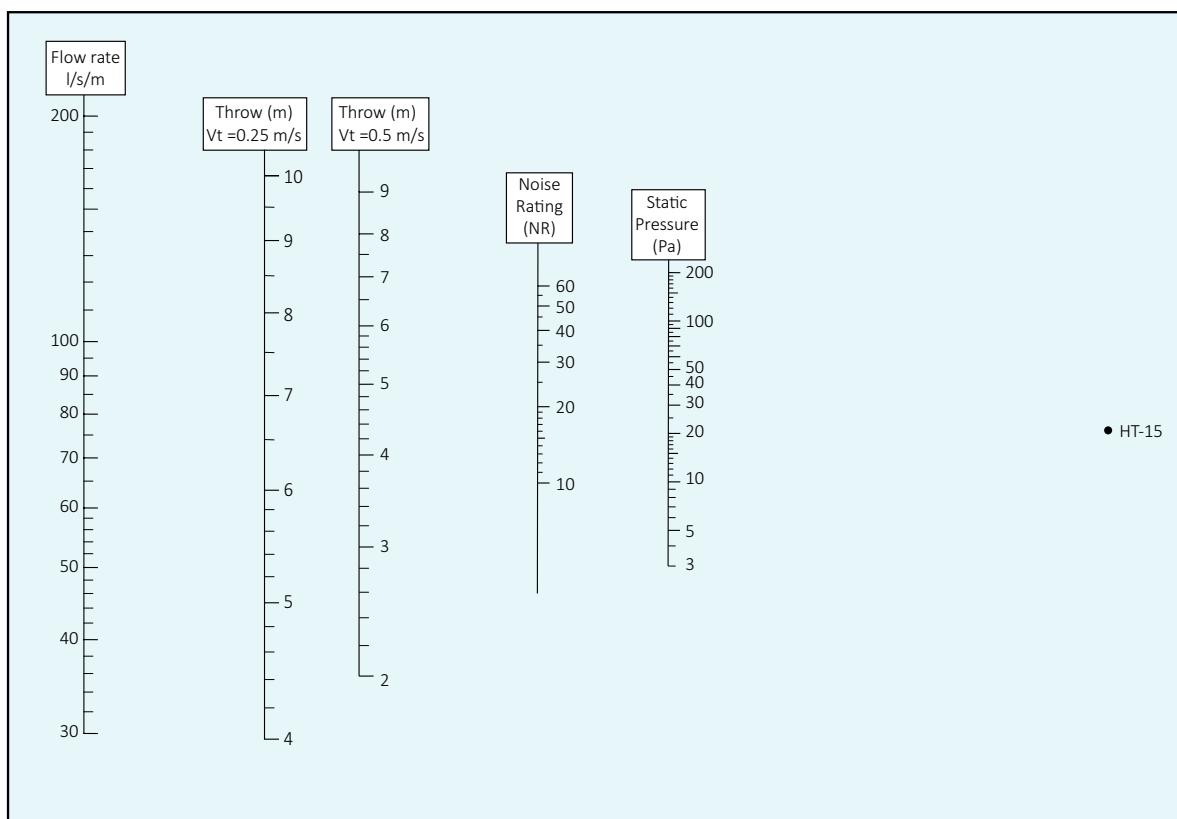

# Performance Data – High Throw (continuous)

## HT-10 (25mm slot)

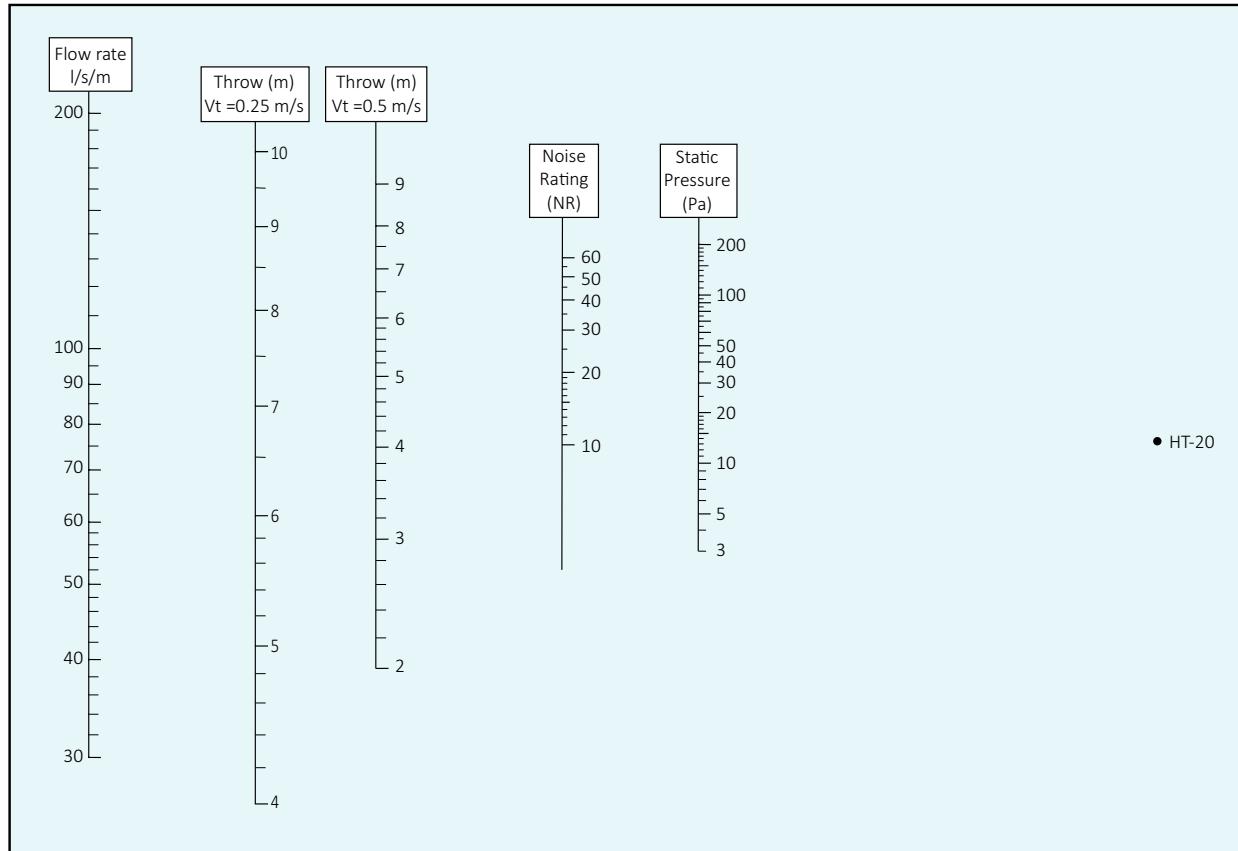

## HT-15 (38mm slot)

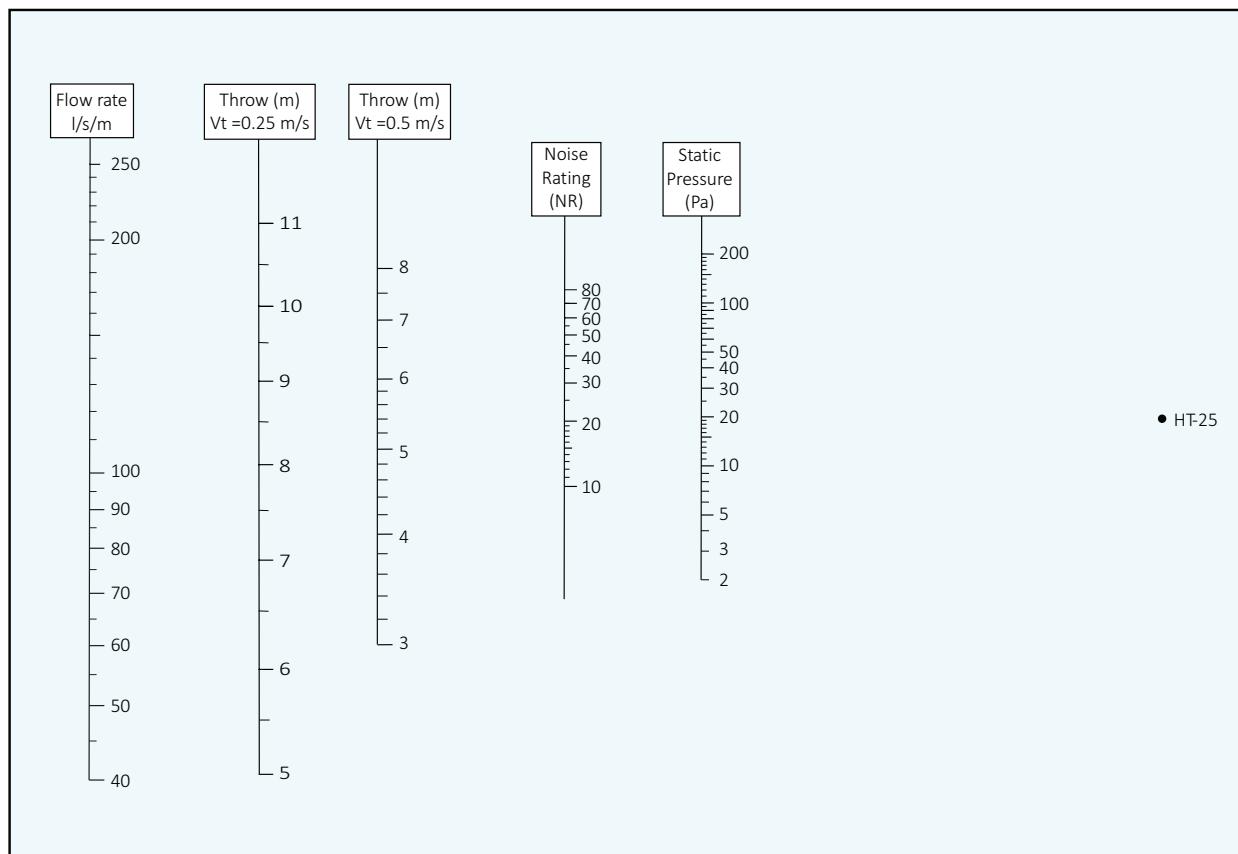

# FLOWBAR

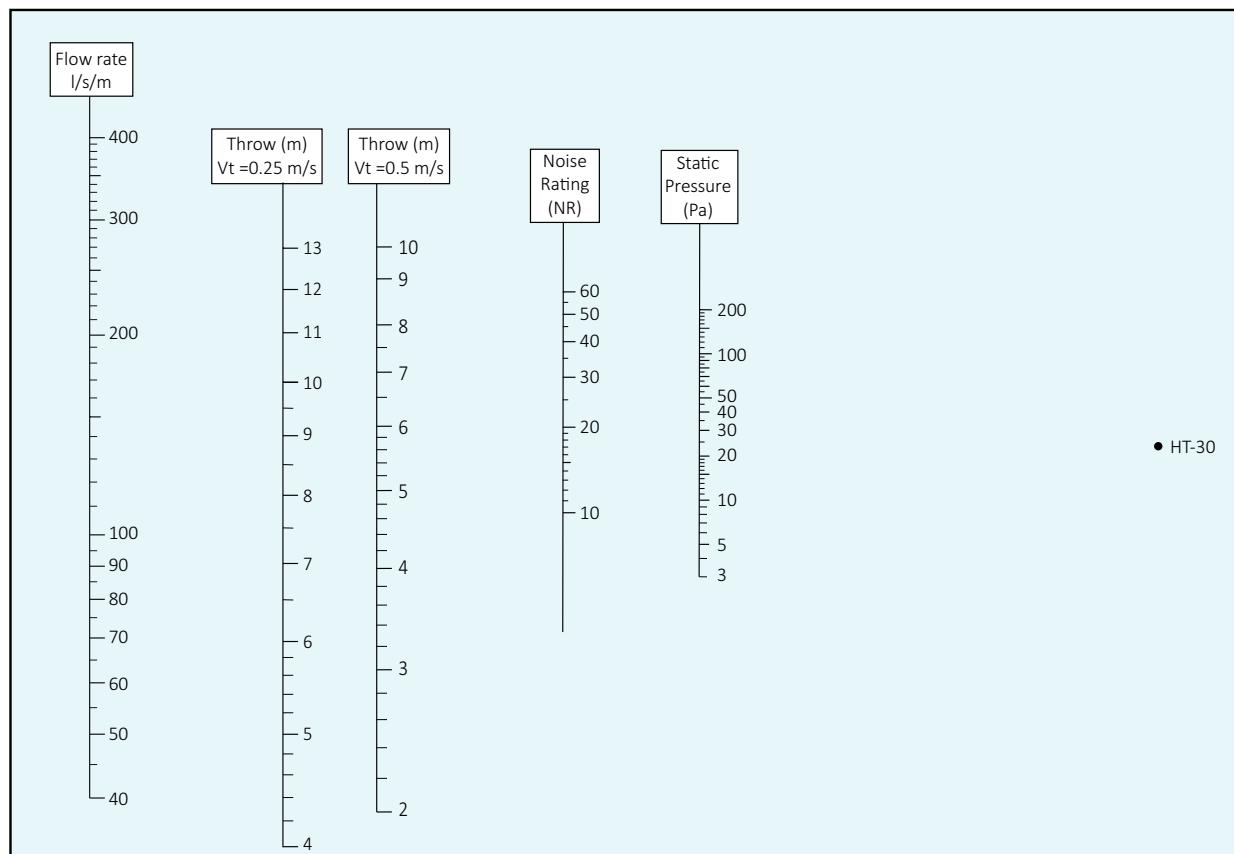

## HT-20 (51mm slot)

## HT-25 (63mm slot)

## HT-30 (76mm slot)

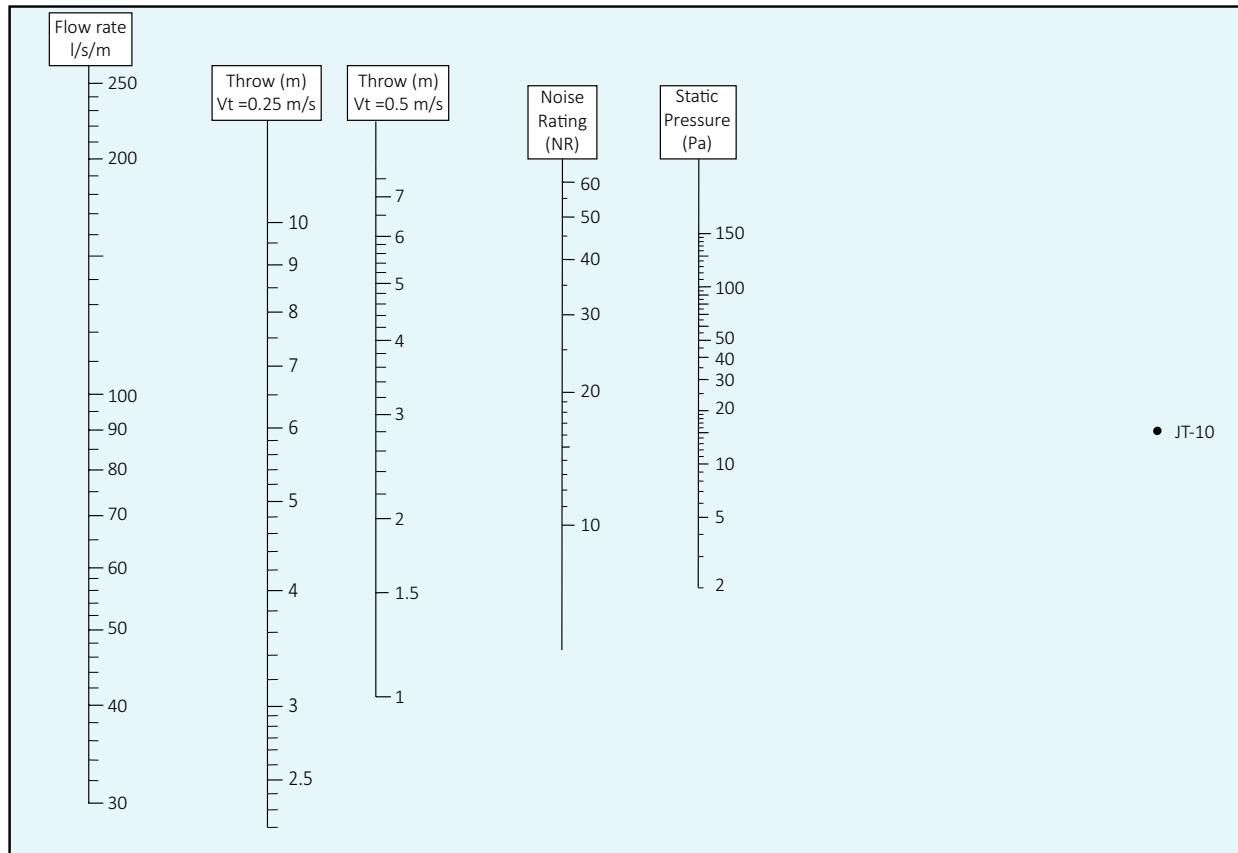

## NR Correction for length

| Length (mm) | 600 | 1200 | 1800 | 2400 | 3000 |
|-------------|-----|------|------|------|------|
| Supply      | -3  | 0    | +2   | +3   | +5   |
| Return      | 0   | +3   | +5   | +6   | +8   |

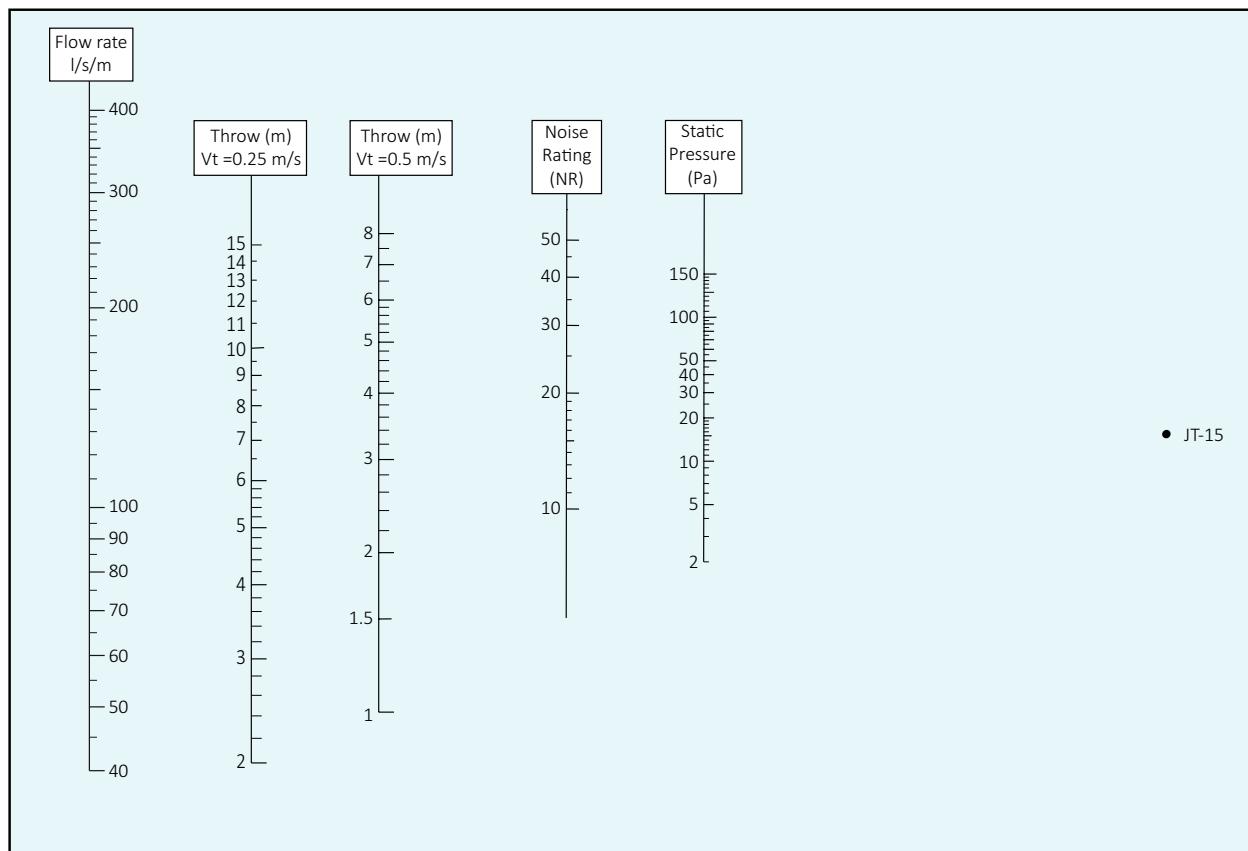

The continuous performance tests were conducted with no Plenum effect for pressure or sound using a 1200mm long section of Flowbar diffuser.

# Performance Data – Jet Throw (continuous)

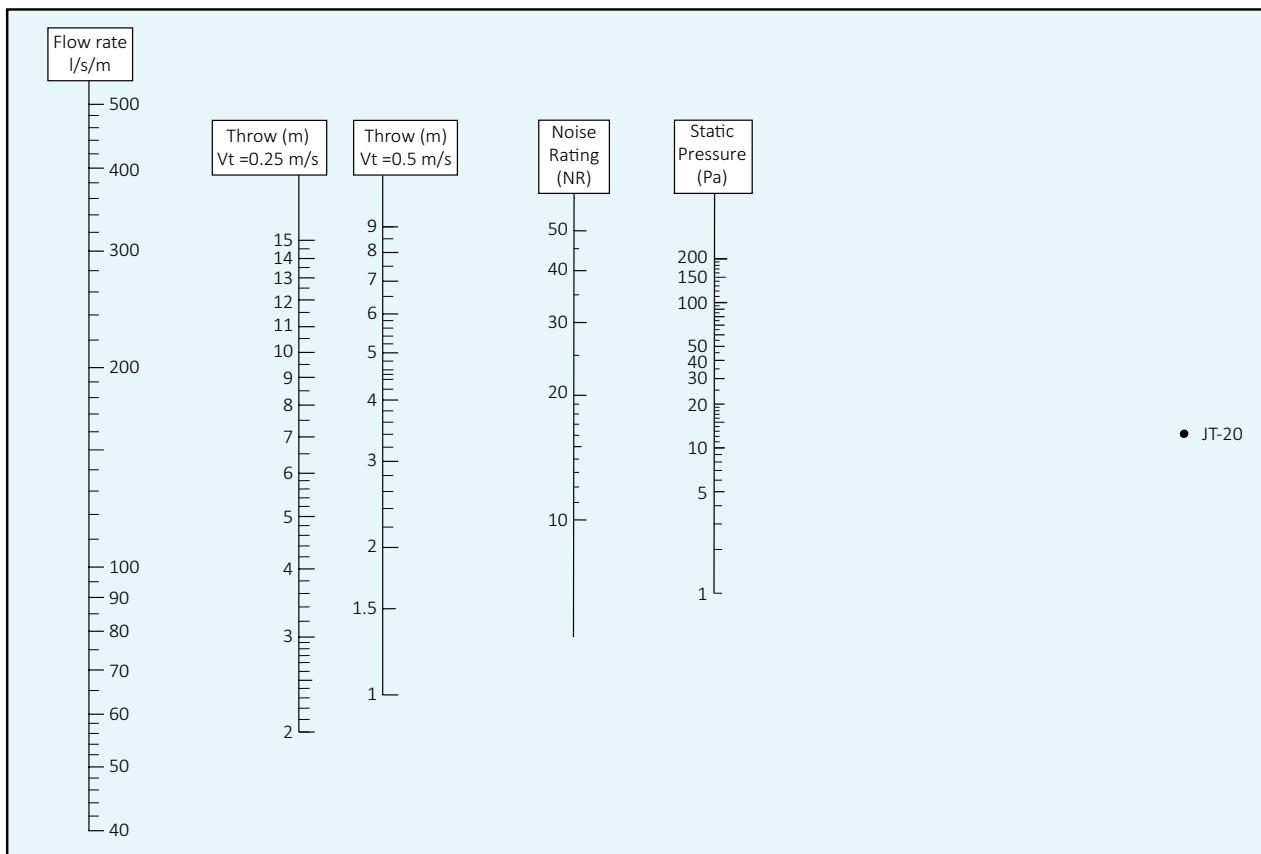

JT-10 (25mm slot)

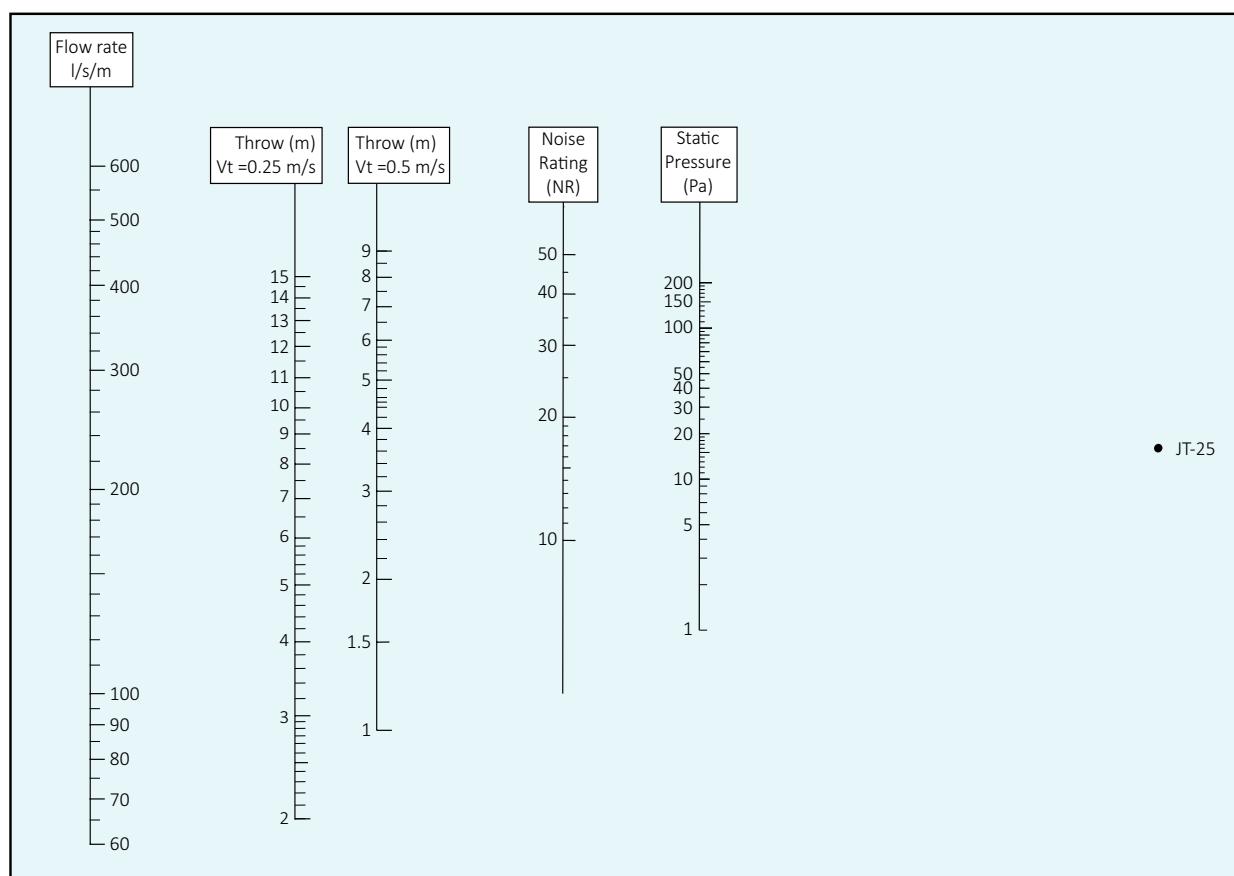

JT-15 (38mm slot)

## JT-20 (51mm slot)

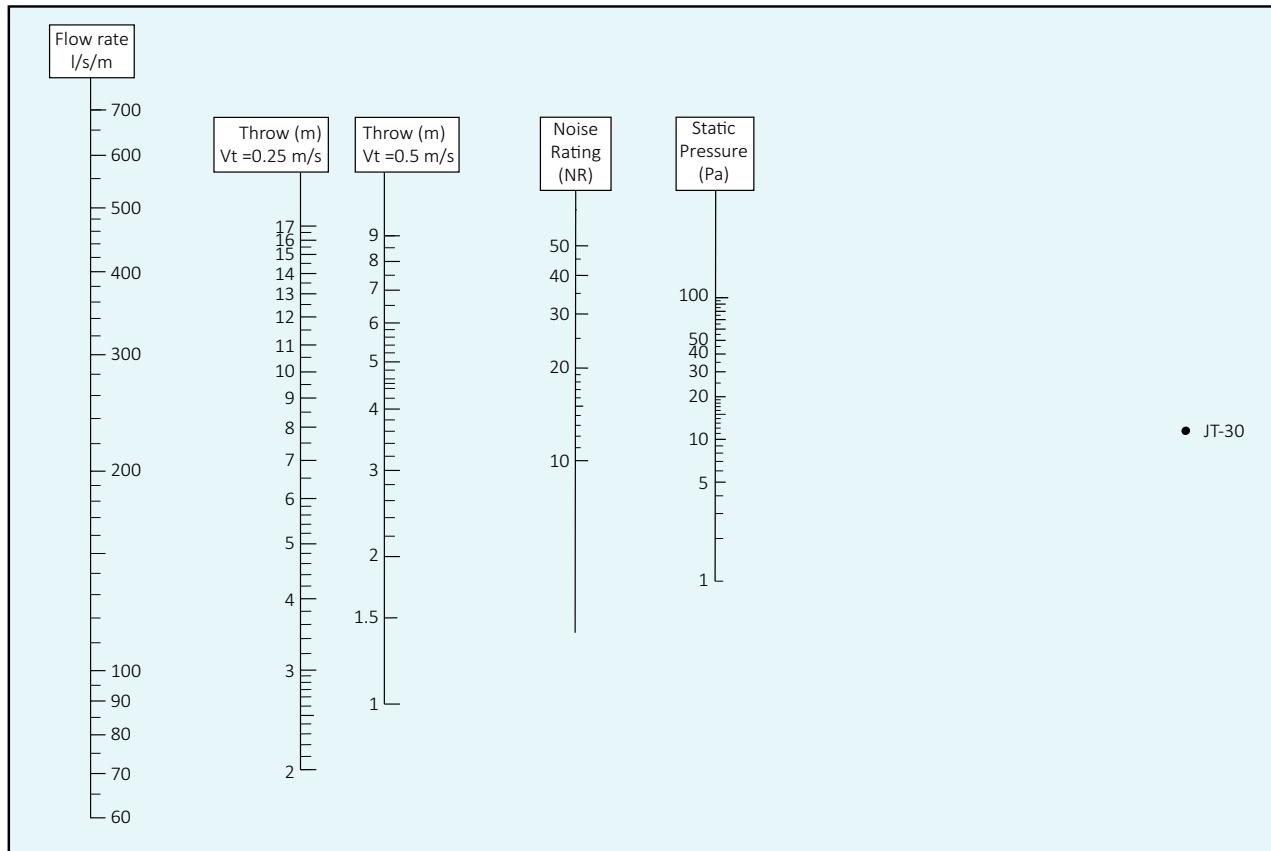

## JT-25 (63mm slot)

# FLOWBAR

## JT-30 (76mm slot)

## NR Correction for length

| Length (mm) | 600 | 1200 | 1800 | 2400 | 3000 |
|-------------|-----|------|------|------|------|
| Supply      | -3  | 0    | +2   | +3   | +5   |
| Return      | 0   | +3   | +5   | +6   | +8   |

The continuous performance tests were conducted with no Plenum effect for pressure or sound using a 1200mm long section of Flowbar diffuser.

# Performance Data - High Throw with Plenum

## FL-10 with 150mm inlet

The tests were conducted with the FlowBar and plenums as a composite assembly

Plenums not provided by Waterloo may demonstrate performance variations from the published data and therefore Waterloo would not be able to subsequently guarantee that performance matches our data.

- Pressures are given in Pascal (Pa)
- Isothermal throw values are given for terminal velocities of 0.8, 0.5 and 0.3m/sec respectively
- Each NR value represents the noise rating curve which will not be exceeded by the sound pressure in any of the octave bands, 2nd through 7th, with a room absorption of 10dB, re 10-12 watts

The tests were conducted with the FlowBar and plenums as a composite assembly

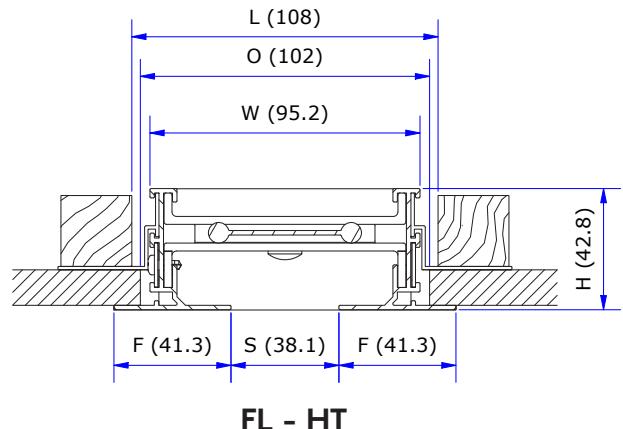

Plenums not provided by Waterloo may demonstrate performance variations from the published data and therefore Waterloo would not be able to subsequently guarantee that performance matches our data.

- Pressures are given in Pascal (Pa)
- Isothermal throw values are given for terminal velocities of 0.8, 0.5 and 0.3m/sec respectively
- Each NR value represents the noise rating curve which will not be exceeded by the sound pressure in any of the octave bands, 2nd through 7th, with a room absorption of 10dB, re 10-12 watts

# Specification Text

## HT

The High Throw series is primarily designed for ceiling applications and allows the air diffuser to become inconspicuous, whilst fully integrating into the ceiling system.

The Flowbar systems satisfy both architectural and engineering requirements for designing an air distribution system that will maintain optimum room air conditions whilst being an integral component of the architectural concept of the project.

Integral pattern controllers are 600mm in length allowing the airstream to be directed left and right for horizontal and vertical airflow.

Standard slot sizes are 25mm, 38mm, 51mm, 63mm and 76mm with single section lengths available up to 2400mm.

Frame styles 66 (surface mounted), 22 and 55 (plaster frame border) and 11 flangeless are available as standard. Factory engineered plenum boxes are supplied to ensure a trouble free installation and to ensure published performance data is met. Plenums not provided by Waterloo may demonstrate performance variations.

Heavy wall extruded aluminium construction

Aerodynamic testing carried out in general accordance to BS EN 12238:2001 (Ventilation for buildings - Air terminal devices – Aerodynamic testing and rating for mixed flow applications).

Acoustic testing carried out in general accordance to BS EN ISO 5135:1999 acoustics. Determination of sound power levels of noise from air-terminal devices, air-terminal units, dampers and valves by measurement in a reverberation room.

## JT

The Jet Throw series has pattern flow controllers to allow the airstream to be jetted in a horizontal direction (sidewall mounted) whilst fully integrating into the wall system.

The FlowBar systems satisfy both architectural and engineering requirements for designing an air distribution system that will maintain optimum room air conditions whilst being an integral component of the architectural concept of the project.

Integral pattern controllers 600mm in length allow the airstream to be directed vertically left and right (ceiling application) and up and down (sidewall application) at a 45° angle.

Jet Throw pattern controllers allow extended throws in typical high bay applications for heated and/or cooled air.

Jet Throw pattern controllers are useful along perimeter walls where heated air can be directed downward.

Standard slot sizes are 25mm, 38mm, 51mm, 63mm and 76mm with single section lengths available up to 2400mm.

Frame styles 66 (surface mounted), 22 and 55 (plaster frames) and 11, flangeless are available as standard.

Factory engineered plenum boxes are supplied to ensure a trouble free installation and to ensure published performance data is met. Plenums not provided by Waterloo may demonstrate performance variations.

Heavy wall extruded aluminium construction.

Aerodynamic testing carried out in general accordance to BS EN 12238:2001 (Ventilation for buildings - Air terminal devices – Aerodynamic testing and rating for mixed flow applications).

Acoustic testing carried out in general accordance to BS EN ISO 5135:1999 acoustics. Determination of sound power levels of noise from air-terminal devices, air-terminal units, dampers and valves by measurement in a reverberation room.
