

LPA

LOCKZONE® Circular ceiling diffuser for supply- and extract air

QUICK FACTS

- Guide vane perforation with swirl spread pattern
- High induction capabilities
- Designed for mounting flush to ceiling
- Simple installation
- Can be used with the commissioning box ALS
- Standard colour White RAL 9003
 - 5 alternative standard colours
 - Other colours upon request

400	315-400	136	490	175	630	225	810

Data is shown for supply air. Data for the combination of LPA and ALS is presented at a total pressure of 50 Pa.

* $) L_{p10A}$ = Sound pressure incl. A-filter with 4 dB room attenuation and 10 m² room absorption area.

Technical description

Design

Circular perforated diffuser for supply- or extract air consisting of two parts, diffuser face, and backing box. The spring suspended and rubber sealed diffuser face has a guide vane perforation in a swirl pattern. The backing box is fitted with a rubber sealed branch connection.

Materials and surface treatment

The backing box is manufactured in galvanized sheet steel. The diffuser face is manufactured in sheet steel and powder coated.

- Standard colour:
 - White semi-gloss, lustre 40, RAL 9003/NCS S 0500-N
- Alternative standard colours:
 - Silver gloss, lustre 80, RAL 9006
 - Grey aluminium gloss, lustre 80, RAL 9007
 - White semi-gloss, lustre 40, RAL 9010
 - Black semi-gloss, lustre 35, RAL 9005
 - Grey semi-gloss, lustre 30, RAL 7037
- Non-painted finish and other colours available on request.

Accessories

Commissioning box:

ALS, manufactured in galvanized sheet steel. ALS contains a removable commissioning damper, a fixed measurement and sound absorbing material with reinforced surface layer, to Fire Resistance Class B-s1,d0 according to EN ISO 11925-2. Tightness class C on the housing according to SS-EN 12237.

Planning

LPA is specifically designed for mounting in plasterboard ceilings. The circular shape of the diffuser face enables mounting of several LPA in a row in a plasterboard ceiling without risk of one or several diffusers being mounted askew. With its concealed mounting the LPA is very suitable for rooms with high demand on esthetical design, for example hotel lobby's or shops.

Installation

Mounting hole is drilled according to the drawing. The mounting frame is placed on top of the ceiling and is folded to a rectangular frame around the hole. The frame is fastened with screws through the ceiling, from below into the perforation. The backing box is placed in the hole with the four mounting angles tightly pressed against the ceiling. Screws are driven through the angles, through the plasterboard ceiling into the perforation of the mounting frame. Connecting duct or commissioning box is riveted to the spigot on the backing box of the LPA. The diffuser face is connected to the safety chain and pressed up into the spring seats.

If the commissioning box ALS is used, it should be fixed to the building construction. The distance between the backing box and the commissioning box can be extended with maximum 500 mm with the standard damper cords and measurement tubes retained. See Figure 1.

Commissioning

Commissioning should be performed with the diffuser face in place. Measurement tube and damper cords are pulled out through the perforations of the diffuser face. A manometer is connected to the measurement tube.

With the K-factor of the diffuser the desired commissioning pressure can be calculated. The damper is set at the correct position and a commissioning knot is tied on the cords to indicate the damper position. The damper is then locked into position. See figure 1.

Measurement accuracy and requirement on straight duct before the commissioning box, see Figure 1. The requirements of straight duct depends on the type of disturbance before the commissioning box. Figure 1 shows a bend, a dimensional change and a T-piece. Other types of disturbances requires at least $2xD$ straight (D = connection dimension) for measurement accuracy of $\pm 10\%$ of the flow.

The K-factor is specified on the product marking, and is also available for download at www.swegon.com.

Maintenance

The diffuser can be cleaned when necessary, using lukewarm water with added detergent. The duct system is accessed when the diffuser face is removed, the distribution plate of the commissioning box pushed to the side and the damper turned anticlockwise from its locked position and removed. See figure 1.

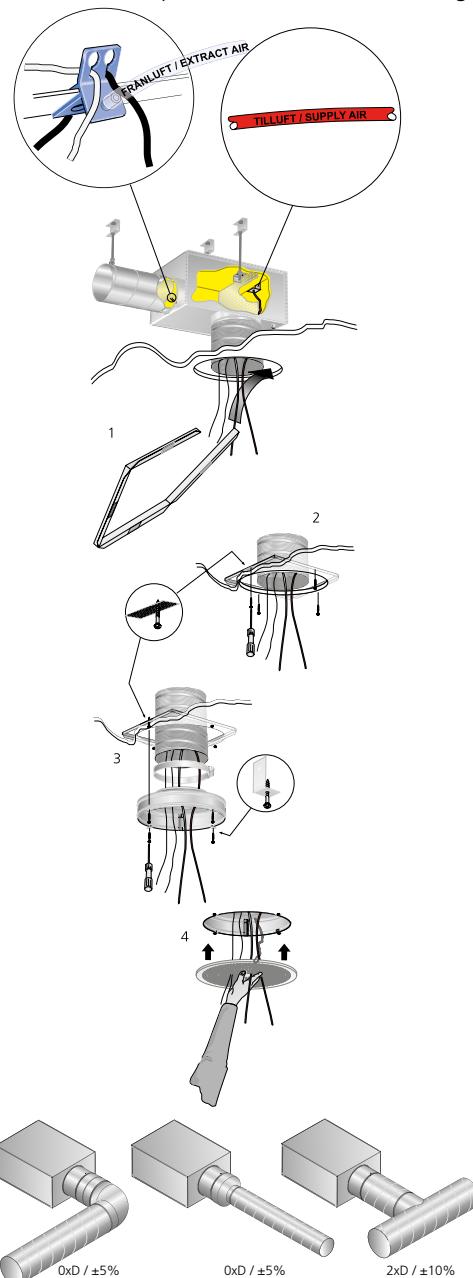

Figure 1. Installation. Commissioning.

Sizing

- Sound pressure level dB(A) applies to rooms with 10 m² equivalent sound absorption area.
- Sound attenuation (ΔL) below is shown in the octave band. Orifice attenuation is included in the values.
- Throw $I_{0,2}$ is measured at isothermal conditions
- The recommended maximum under-temperature for LPA is 14 K.
- For calculating the width of the air stream, air velocities in the occupied zone or sound levels in rooms with other dimensions, please refer to our web calculation softwares available for download at www.swegon.com.

Engineering graphs – LPA – Supply air

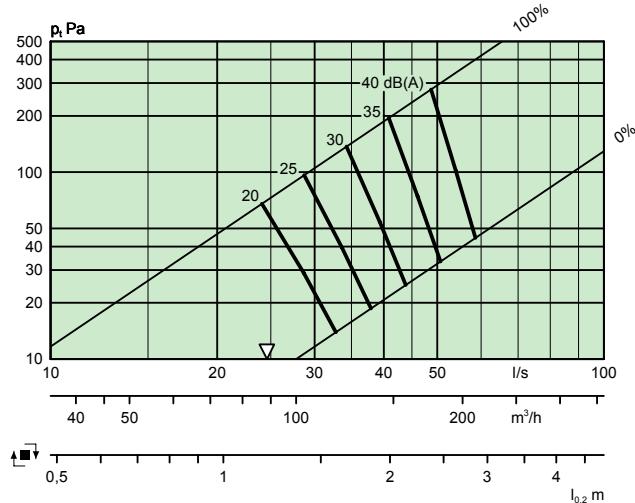

Airflow – Pressure drop – Sound level – Throw

- The graphs display data for LPA recessed into ceiling.
- The graphs should not be used for commissioning.
- Δ = Minimal flow to obtain sufficient commissioning pressure. The dB(A) values are valid for rooms with normal acoustic absorption of 4 dB.
- dB(C) values are normally 6-9 dB higher than dB(A) value.

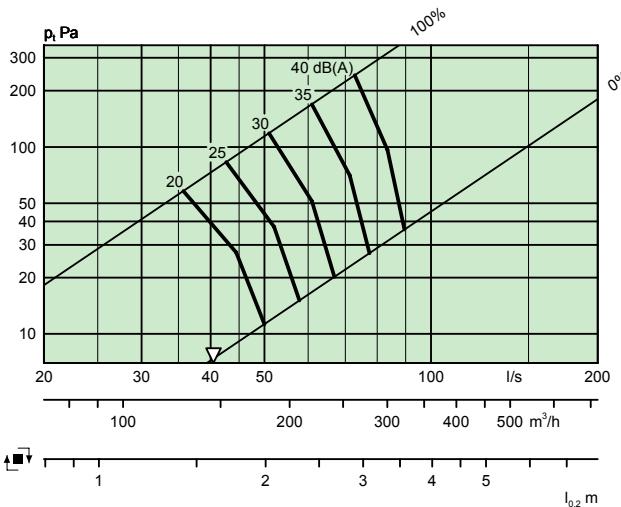

LPA 160, 200, 250, 315, 400 - Supply air

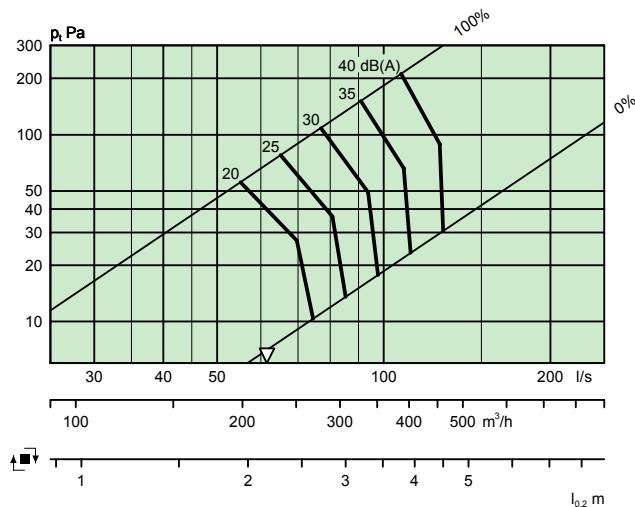

LPA 160 + ALS 125-160, Supply air

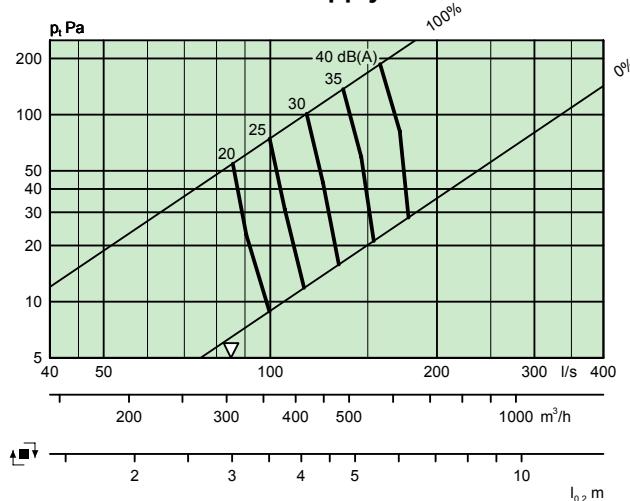

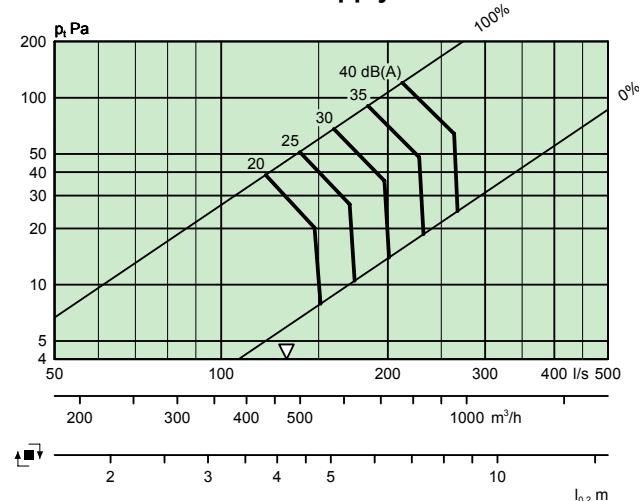

LPA 200 + ALS 160-200, Supply air

Specification example

Swegons perforated circular ceiling diffuser of the type LPA with the commissioning box ALS containing the following functions:

- LOCKZONE guide vane perforation
- Removable commissioning damper with lockable controls
- Measurement function with low method error
- Internal acoustic lining with reinforced surface layer
- Powder painted in white, RAL 9003/NCS S 0500-N
