

GOLD Refurb kit

Update GOLD control systems and fans

GOLD air handling units are built to last. By replacing selected components and installing new controls, the product gets a boost and lives longer.

Update instead of replace

The Refurb kit is a spare parts solution that updates older GOLD air handling units to the control system and functionality of today. Also, the complete fan inserts are changed to modern fans with EC motors.

Suitable for GOLD units delivered 1996 - 2009:

- Version 3/4, sizes 4 and 5 (1996-2001)
- Version A (2001-2002)
- Version B (2002-2005)
- Version C, RX, PX, CX (2005-2009)

Primary benefits

- Prolonged life and secured availability of spare parts
- Extended functionality, connectivity and digital services
- User-friendly interface
- Improved energy efficiency of the fans
- Reduced CO₂ impact and lower cost compared to a new unit
- Quick and easy installation

25% embodied CO₂
Refurbishment saves 75% of embodied carbon compared to a new unit.

33% cost
The cost is around a third compared to installing a new unit.

Comparable operational cost
Thanks to old GOLD RX units already having high-efficiency rotors and replacing the fans.

How does it work?

A Swegon technician inspects the GOLD unit to determine if/what refurbishment is appropriate and what additional components might be needed to ensure full functionality and compatibility with the new control system. The Refurb kit is ordered and a Swegon technician makes the installation and starts up the air handling unit.

All essential components are included, such as:

- IQlogic controller
- IQnavigator 7" hand-held terminal
- Sensors (pressure, temperature)
- Heat exchanger control system
- Complete fan inserts with necessary adaptation components
