Easier and faster installation

Smart Access offers installers a simpler and faster way to adjust the ventilation! With the help of the installer's 3G/4G installation package the adjuster can move from one diffuser to another and check the ventilation unit directly from a mobile phone, which significantly speeds up adjustment work!

Know what you are breathing!

With Smart Access you can easily view diagnostic data of air temperatures, humidity, CO2 levels and even VOC-levels, depending on which sensor and automation packages you have chosen. In case you would like to add more automation and sensors to your ventilation unit, that can be done easily buy ordering Swegon CASA automation package through our Smart Access linked webshop!

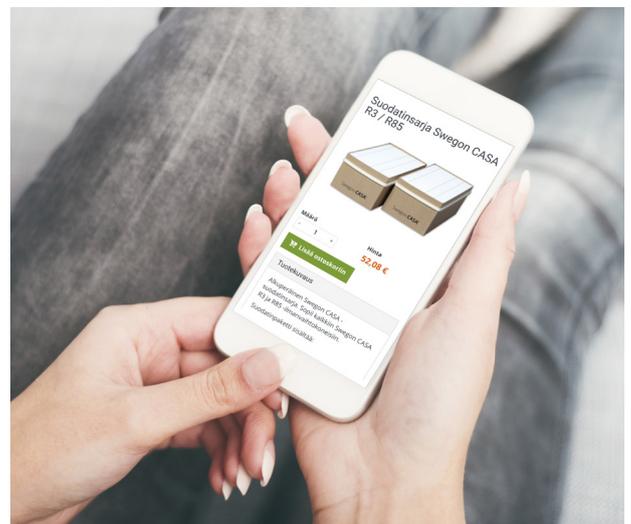

Easy access to help

In case you need assistance with your air handling unit, Smart Access is integrated to our intelligent online support Service: CASAHelp. There you can do trouble shooting, you can download manuals, see tutorial videos or even call for a service technician.

Easy filter change

Smart Access notifies you when it is time to change the filters. Moreover, you can order new filters through the Smart Access! That is the easiest way to make sure you get the right original filters for your Swegon CASA ventilation unit!

Technical data

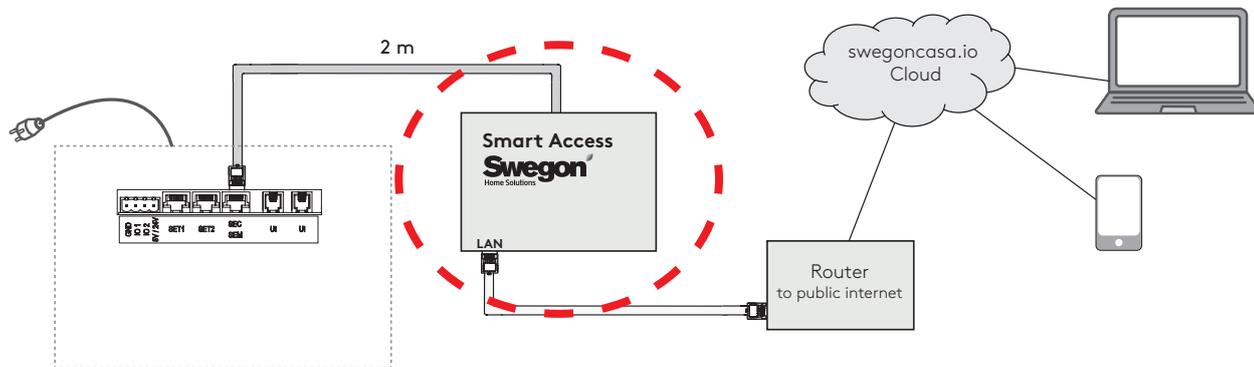

In order for Smart Access to work it is necessary to connect the ventilation unit to the Internet using the Smart Access module (accessory). The Smart Access module can be connected to an Internet network using a LAN cable or to a wireless network with the help of a WAN router. Using a 3G modem (SMAG) the installer or service engineer can utilise the functions in Smart Access with the help of a 3G/4G connection before the Internet installation has been installed.

Connection to a fixed LAN (SMA)

Connect the Smart Access module's cable to the ventilation unit's SEC/SEM outlet. Connect Smart Access to the Internet using a LAN cable.

Included: Smart Access + 2m cable for ventilation unit

Part no.	Description
