

PMDb

Perforated supply and exhaust air diffuser
for walls

FUNCTION

The PMDb is a complete, rectangular diffuser for supply and exhaust air for wall installation. Suitable for constant or variable flow. Air supply preferably at under-temperature.

QUICK FACTS

- Complete diffuser
- Cleanable
- Removable damper
- Simple commissioning, fixed measuring unit

SNABBVAL

PMDb Size	AIR FLOW - I/s Min. flow	SOUND LEVEL		
		25 dB(A)	30 dB(A)	35 dB(A)
200 x 100	8	14	17	19
300 x 100	10	16	19	23
400 x 150	14	25	30	36
500 x 150	23	37	42	52
550 x 200	29	48	58	68
550 x 300	43	65	80	95

Applies to open slot and open damper.
Min. flow on balancing pressure drop = 5 Pa.

DESIGN

The PMDb consists of 2 sections. The ALVa plenum box has a fixed measuring unit, removable acoustic baffle and removable damper, to permit easy access for duct cleaning. The measurement outlet and damper setting device are easily accessible from the room. The diffuser section with a removable acoustic baffle is made of aluminium and galvanised steel, and is painted white. The plenum box is unpainted.

The PMDb is available in two versions: duct connection at the rear or side connection. Each version is available in 6 sizes.

PLANNING

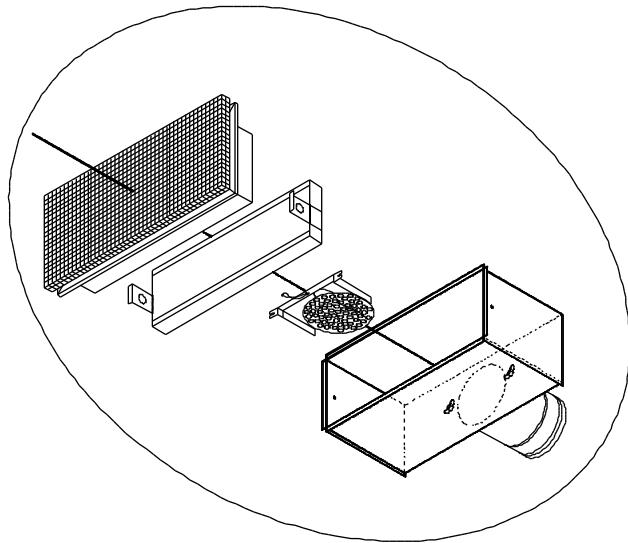

INSTALLATION: The plenum box is mounted into the wall from the room. All sizes fit c/c 600 mm beam partitions. The diffuser section is pressed into the box after painting/wallpapering.

COMMISSIONING: To be carried out with the diffuser section mounted. This method of measurement has a documented low method error. Lockable adjustment. The measuring unit and damper setting device are easily accessible from the room.

TECHNICAL DATA

The sound level dB(A) applies to rooms of 10 m² equivalent absorption area.

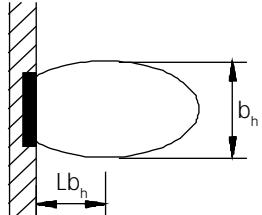

Throw L_{0.2} is applicable to isothermal conditions.

Spread pattern

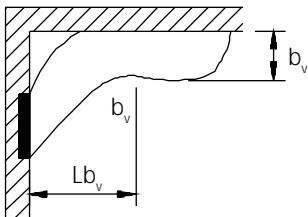

(For isothermal air supply)

$$\begin{aligned} b_h &= l_{0.2} \times 0.6 \\ L_{bh} &= l_{0.2} \times 0.4 \end{aligned}$$

Open slot

$$\begin{aligned} b_v &= l_{0.2} \times 0.06 \\ L_{bv} &= l_{0.2} \times 0.1 \end{aligned}$$

Engineering graphs - PMDb - supply air

Air flow - Pressure drop - Sound level - Throw

The graphs present the data for the PMDb mounted with its upper edge 200 mm from the ceiling. For side connection (K), the sound level increases by about 2 dB(A) for sizes 200-100, 300-100, 400-100 and about 5 dB(A) for sizes 500-150, 500-200 and 500-300.

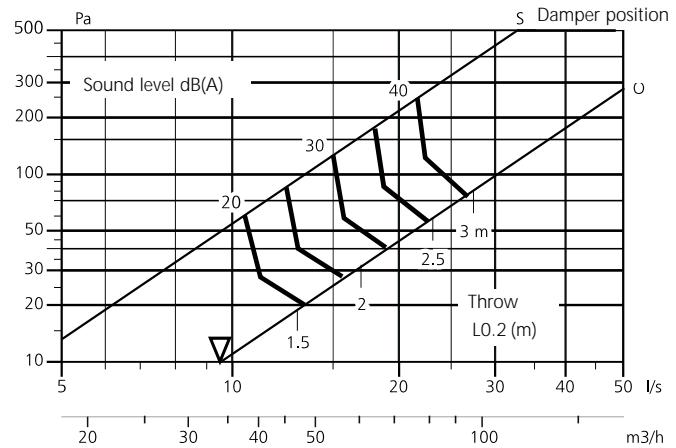

The pressure drop increases by about 10% for all sizes.

PMDb 200-100

Specification example

Stifab Farex perforated supply and exhaust air diffuser, type PMDb, with the following functions:

- Adjustable throw
- Removable commissioning damper with regulating cords
- Measurement function with low method error
- Internal sound absorber with reinforced outer surface
- Powder-coated in white
