

## MOUNTING INSTRUCTION, ELECTRIC HEATER CACZ-1-02

The electric heater is mounted in the space for supply air fan, see sketch 1.

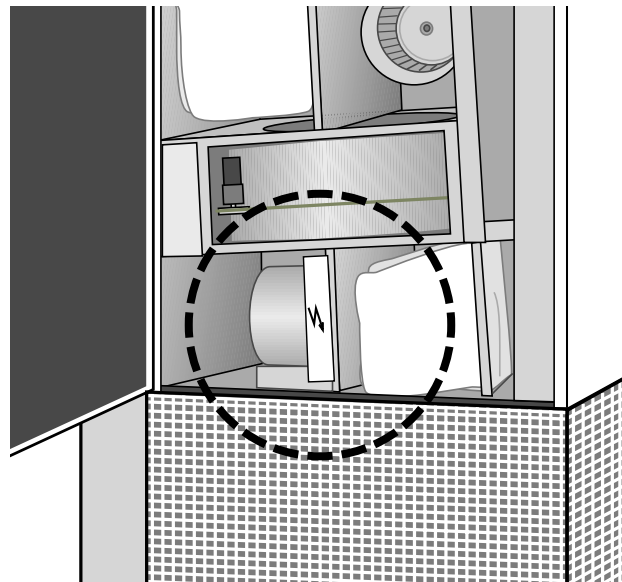

The mounting is carried out on the left side of the lower medium plate.

The coil is screwed to the medium plate with the 3 delivered screws. The medium plate has 3 pre-pressed holes which are covered by a service sticker, see sketch 2.

When the coil is mounted, connect the contact to applying connection at the electric box.

When the coil is connected to the CACA unit, the unit must be "told" that the coil is connected. (See instruction for CACA).
