Instructions for Installation Cable adapter 32611101, GOLD SD

1. General

Cable adapter 32611101 is used for connecting a supply air handling unit and an extract air handling unit together with a common control unit located in one of the air handling units. The air handling unit with the control unit has the text IQnomic on its product identification plate.

2. Installation

A cable adapter is installed inside the electric equipment cubicle of the GOLD units without control unit. The supply of these units also includes an unmounted cable adapter.

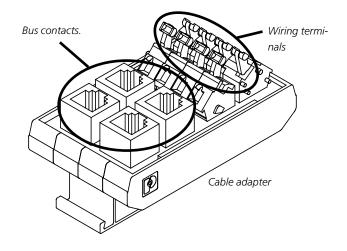

The unmounted adapter should be installed on the DIN rail inside the electric equipment cubicle on the GOLD air handling unit with control unit. See the illustrations on the following pages.

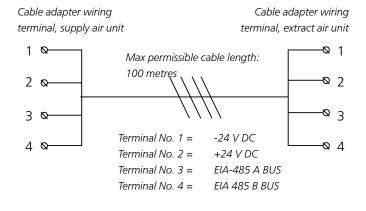

3. Electrical connections

Connect the bus cable (part no. 32249801) between the bus contact on the control unit and the cable adapter. See the illustrations on the following pages.

Connect the cable between the supply air handling unit and the extract air handling unit from wiring terminal to wiring terminal, i.e. from Terminal No. 1 in the supply air handling unit to Terminal No. 1 in the extract air handling unit, see the illustration to the right. Use one of the openings in the oblong rubber-faced cable glands on the inspection sides of the air handling units, for running the cable into the electric equipment cubicle.

The cable between units is not included in the supply. Twisted-pair cables are recommended. Use one cable pair for 24 V and the other cable pair for bus communication.

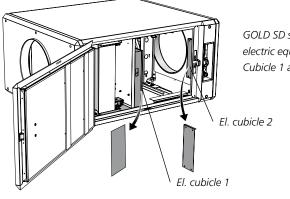

GOLD units without control unit

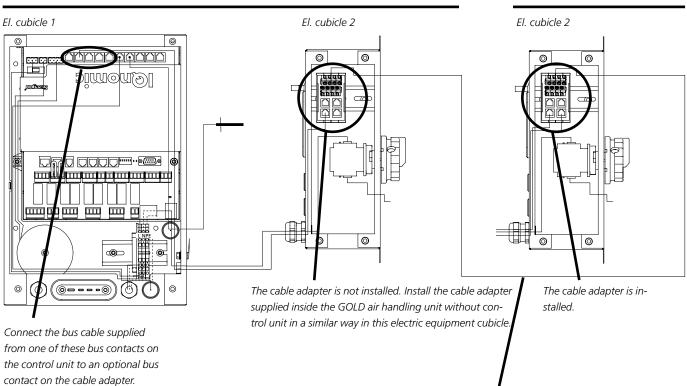

3.1 GOLD SD, sizes 04/05, 08 and 12

GOLD SD sizes 04/05, 08 and 12 contain two electric equipment cubicles; here called El. Cubicle 1 and 2.

3.1.1 GOLD SD, sizes 04/05, 08 capacity variant 1 and size 12

GOLD units with control unit

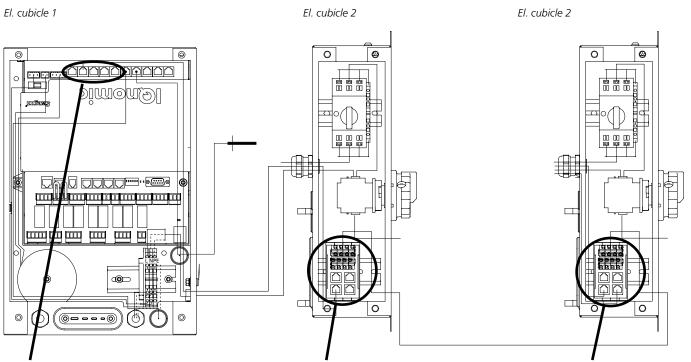

NOTE! If the heat recovery coils are selected as accessories for size 12, the bus cable should be run via the cable adapter in the electric equipment cubicle of the pipework package.

GOLD units without control unit

3.1.1 GOLD SD, size 08, capacity variant 2

GOLD units with control unit

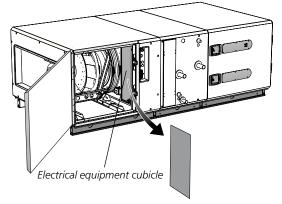

Connect the bus cable supplied from one of these bus contacts on the control unit to an optional bus contact on the cable adapter. The cable adapter is not installed. Install the cable adapter supplied inside the GOLD air handling unit without control unit in a similar way in this electric equipment cubicle.

The cable adapter is installed.

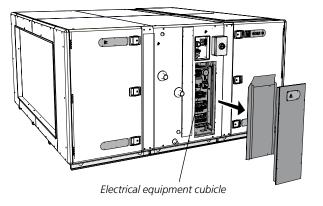

3.2 GOLD SD, sizes 14-120

GOLD SD, sizes 14-80

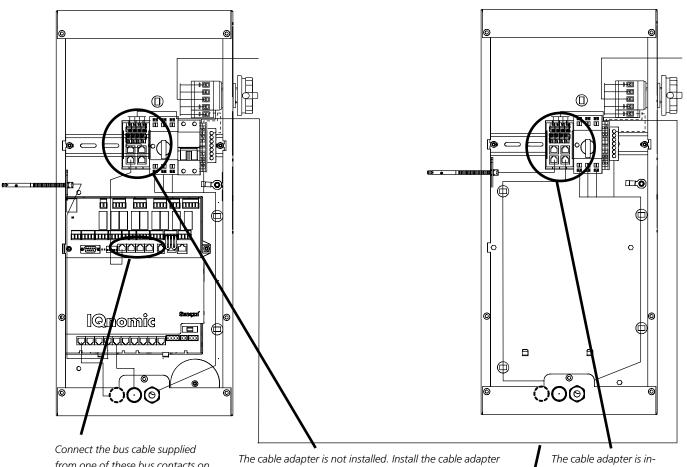

GOLD units with control unit

GOLD SD, sizes 100/120

GOLD units without control unit

from one of these bus contacts on the control unit to an optional bus contact on the cable adapter.

supplied inside the GOLD air handling unit without control unit in a similar way in this electric equipment cubicle. stalled.

NOTE! If the heat recovery coils are selected as accessories, the bus cable should be run via the cable adapter in the electric equipment cubicle of the pipework package.
