

# Installation, extra TBLZ-22 hand-held terminal GOLD/COMPACT

## General

The extra hand-held micro terminal is designed for applications in which one hand-held micro terminal must be available by the air handling unit and another one is needed at another location.

The extra hand-held micro terminal has the same functionality as the usual hand-held micro terminal, with the following exceptions:

The manual test menu is blocked.

Alarms cannot be reset.

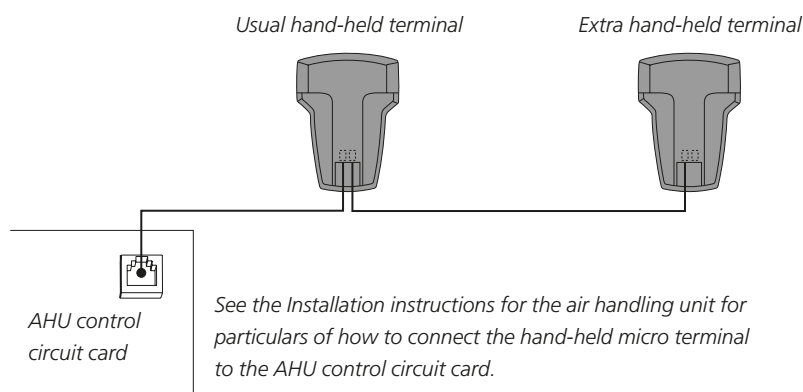

The AHU can be stopped but not started.

The AHU can not be set to auto operation, manual low speed or manual high speed.

The TBLZ-2-13 extension kit can be used if the distance between the air handling unit and the hand-held micro terminal exceeds the length of the terminal's connection cable.

## Electrical connections

### TBLZ-1-22, extra hand-held terminal

### TBLZ-2-22, extra hand-held terminal with split connector
